Allowable Subject Matter

1. Claims 1-36 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art of record, neither anticipates nor renders obvious the following limitations as claimed:
[Claims 1, 26, 32, 36]: An image processing apparatus having offset and optical black correction circuit coupled to receive control signal having first and second phase and an optical black signal from a charge coupled device, comprising: a. "first circuit sample the optical black signal at a predetermined reference voltage, the first circuit comprises a correlated double sampler, ii. a first and second programmable gain amplifier, the first programmable gain amplifier coupled to the correlated double sampler, (and) an adder coupled between the first and second programmable gain amplifiers b. a second circuit to correct the optical black offset coupled the first circuit, wherein the second circuit couples between the adder and the second programmable gain amplifier to add the positive and negative difference to the optical black signal" in combination with other claimed elements.

The following prior art shows the current state of the art in regard to this patent application:

- i. Mangelsdorf (US Patent # 6,018,364) teaches in figure 12, a PGA 30 connected to an ADC 38. A reverse PGA 140 is coupled to an integrator 66, which is further coupled to an adder 58. The input of adder is also coupled to a CDS. Mangelsdorf fails to teach a PGA coupled to a CDS and an adder coupled between the first and second programmable gain amplifiers, a second circuit to correct the optical black offset coupled the first circuit, wherein the second circuit couples between the adder and the second programmable gain amplifier to add the positive and negative difference to the optical black signal.
